All of our vegetal raw materials are produced in our Fitoplancton Marino production plant and the zooplanktonic raw materials in the 11300 Ha of our Veta La Palma facilities in the Doñana Natural Area (Natural Park and Biosphere Reserve).
We have lyophilizers in each of the facilities to ensure lyophilization with maximum freshness of the ingredients, so that we move from nature to the aquarium in perfect nutritional conditions.

SPECIALITIES

easy art

Easyart is liquid marine phytoplankton for the culture of artemia.
The microalgae species Tetraselmis (100 %) is used for the culture of artemia.
Easyart can be added automatically using a dosing pump provided that the correct dispersion of the product is guaranteed.

Available formats: 250 ml and 1500 ml

easy roti

Easyroti is liquid marine phytoplankton, specifically formulated for rotifer culture.
Two species of microalgae Nannochloropsis (80 %) and Tetraselmis (20 %) are used for rotifer culture.
Easyroti can be added automatically using a dosing pump provided that the correct dispersion of the product is guaranteed.

Available formats: 250 ml, 1500 ml and 3000 ml

easy rich

Easyrich is liquid marine phytoplankton for zooplankton enrichment.
Two species of microalgae Nannochloropsis (50 %) and Isochrysis (50 %) are used for zooplankton enrichment.
Available format: 250 ml

Easyphyt

Easyphyt is a culture medium specifically developed by Easy reefs for small and medium scale phytoplankton culture.
Its formula based on the classic Guillard's F/2 is suitable for the culture of Tetraselmis, Nannochloropsis, Isochrysis and Rhodomonas, among others.
For the culture of diatoms, such as Phaeodactylum or Chaetoceros, the use of specific culture media rich in silicate is recommended.

Available formats: 250 ml and 1500 ml.

easy feeder

Our Easyfeeder peristaltic dosing pumps, available in Master and Slave versions, allow regular and precise dosing.
The ease to use and programming combined with its compact and robust design make Easyfeeder a great solution for automatic dosing in our systems.
Up to 4 Easyfeeders can be easily connected to each other by means of a magnet.

easyractor

Easyractor 4 L is a bicylindrical reactor made of methacrylate with truncated cone shape and specifically designed for the semi-automated culture of rotifer using Easyroti rotifer feed. Each cylinder has an operating volume of 2 net litres.
The use of Easyractor 4 L in combination with Easyroti allows the continuous availability of food for fish larvae and corals, without relying on phytoplankton cultures.

easy connect 25

Easyconnect is an adapter specifically designed to allow the use of peristaltic dosing pumps during the dosing of our liquid products.
Two adapters are available, Easyconnect 25 for 250 ml formats and Easyconnect for 1500 ml and 3000 ml formats.

WORLD LEADER IN MARINE MICROALGAE PRODUCTION.

easy reefs®

Enthusiasm, passion, professional rigour, cuttingedge technology and quality are the ingredients

Follow us:

www.easyreefs.com

easysps

Easysps is a natural blend of marine plankton that has been developed for SPS coral nutrition.
Easysps will enhance the bright and intense colors of the corals. It will also help strenghthen and promote healthy growth of SPS corals
We recommend using Easysps in conjunction with Easybooster to prevent any possible nutrient limitation and support the natural balance of the system.

Available formats: 20 g and 40 g.

easysps EVO

Easysps EVO is a premium mixture of natural marine plankton in a mineral suspension that has been specifically designed to be used with a dosing pump to ensure an accurate and regular nutrition of the SPS corals.
Easysps EVO will enhance the brightness and intensity of the colors of the corals. It will also help strengthening and growing SPS corals healthy.

Available formats:
Easysps EVO 250 ml, Easysps EVO Prof 1500 ml, Easysps EVO EXPERT 1500 ml (double concentration).

easy booster

Easybooster is marine phytoplankton, stabilized at the optimum moment of its development to guarantee all the nutritional and biological active properties of marine microalgae, which are the basis of the trophic chain.
Easybooster is a blend of four different species of marine phytoplankton, developed specifically for feeding microfauna, filter feeders and corals in the reef aquarium.
Specifically designed to be used together with dosing pumps to ensure the regularity and accuracy of the doses.
Easybooster Nano has been developed to ease the dosing in aquariums under 250 L. Same composition with a lower concentration.

Available formats:
Easybooster 250 ml and Easybooster 1500 ml.
Easybooster Nano 90 ml and Easybooster Nano 250 ml.

easy reefs®

easyLPS

EasyLPS is a mixture of zooplankton and marine microalgae designed for the specific nutrition of LPS corals.
The perfect combination of ingredients and the size of 800 µm ensure an optimal digestibility and capture capacity for most LPS corals.

Available formats: 30 g and 70 g.

easy masstick

Easymasstick is formulated as a self-adhesive paste ready to be used at any point in the aquarium according the feed habits of the fish for which it is intended.
Easymasstick don't require any previous hydration. Simply take the necessary amount, knead it gently into a ball, stick it to the glass, rock or decoration and enjoy watching your favorite animals while they eat.
Easymasstick formula naturally attracts finicky fish which begin eating it immediately or shortly after adding it to the aquarium.

Available formats: 40 g and 80 g.

masstick

Masstick is a mixture of various all-natural compounds of our own production, highly technical and intended for the balanced and natural feeding of omnivorous fish and marine invertebrates.
Masstick is mainly composed of freeze-dried Palaemonetes varians, it does not contain fish skeleton and is therefore very low in phosphates compared to its protein content.
The rehydratable powder formulation allows Masstick to be blended with any mollusc or crustacean pulp as well as fish eggs, artemia, rotifer, copepods and medicines that are administered orally.

Available formats:
14 g, 42 g, 70 g, 100 g and 1 kg.

easy reefs®

dki marine

DKI Marine is a complete feed, which has been developed to satisfy all the nutritional needs of omnivorous marine fish from the coral reef biotope.
DKI marine is composed mainly of freeze-dried shrimp meal (Palaemonetes varians) from Veta La Palma in the natural area of Doñana.
DKI marine is presented in the form of mellow granules with neutral buoyancy. It is available in granulometries of Ø 0,8 mm, Ø 1,2 mm y Ø 2 mm.

Available formats: 50 g, 70 g and 150 g.

freshtick omnivorous 42

Freshtick Omnivorous has been conceived and developed to cover all the nutritional needs of omnivorous freshwater fish. It does not require any additional supplementation to maintain the optimal health status of the animals for which it is intended.
Freshtick Omnivorous is composed of a mixture of microalgae (Tetraselmis chuii, Isochrysis galbana, Haematococcus pluvialis and Phaeodactylum tricornutum) and shrimp (Palaemonetes varians) freeze-dried immediately after capture.

Available formats: 42 g.
