Take a sustainable step
for the pond and the future

Nature rules in garden ponds. Natural processes provide a biological balance in the water biotope. However, sometimes it helps to give plants and micro-organisms in the pond a helping hand. The Vincia natural products improve water quality naturally. They are 100% environment friendly and biodegradable. Besides the natural resources, Vincia is also continuously looking for new ways to reduce packaging and transport. All production takes place in Europe. Recyclable packaging and the use of recycled material are important focus areas at Vincia.

	Product name	Product description	Art.nr.	Price
1	**Toru-Active** 2100 g	*natural pH reduction* for 5000 litres of water *on the basis of peat*	142130	**14,99**

	Product name	Product description	Art.nr.	Price
2	**Toru-Stroh** 2600 g	*natural product for ponds, barley* for 10.000 litres *straw and high moor peat*	143216	**19,99**

	Product name	Product description	Art.nr.	Price
3	**Strobinol** 1500 g	*natural product for ponds, barley* for 6000 litres of water *straw in pellet form*	143210	**13,99**

Natural function

1	Product name	Product description		Art.nr.	Price
	Maërl 700 g	for 20.000 litres of water	*natural product for clear water and a healthy pond*	142105	**4,99**
	Maërl 1800 g	for 50.000 litres of water	*natural product for clear water and a healthy pond*	142111	**9,99**
	Maërl 3300 g	for 100.000 litres of water	*natural product for clear water and a healthy pond*	142115	**17,99**

2	Product name	Product description		Art.nr.	Price
	Maërl Crystal 1500 g	for 20.000 litres of water	*natural product for clear water and a healthy pond*	142117	**6,99**
	Maërl Crystal 3600 g	for 50.000 litres of water	*natural product for clear water and a healthy pond*	142119	**13,99**

3	Product name	Product description		Art.nr.	Price
	Sludge Cleaner 1700 g	for 10 m²	*removes biologically pond bottom sludge*	142323	**6,99**

Pond maintenance all year round

1	Product name	Product description		Art.nr.
	Vincia 100% natural combi display		*natural products for a healthy and algae-free pond*	142327

The display includes:
8x Strobinol
8x Toru-Stroh
6x Toru-Active
6x Maërl 700g
6x Maërl Crystal 1500g
4x Pond Cleaner 1000g
4x Sludge Cleaner 1700g
4x Maërl Crystal 3600g
4x Sludge Cleaner 4250g

1 / January
Keep an area of the water surface free of ice to allow accumulated gases to escape from the pond.

2 / February
Maërl or **Maërl Crystal** increases the water hardness and the pond becomes clear and healthy again.

3 / March
Sludge Cleaner removes pond bottom sludge. In this way, a nutrient source for algae is removed from the pond.

4 / April
Pond Cleaner sinks to the bottom of the pond and binds phosphate. This nutrient source for algae is removed.

5 / May
Strobinol are pellets of pressed barley straw. In the pond this inhibits the development of algae.

6 / June
Maërl or **Maërl Crystal** increases the water hardness and the pond becomes clear and healthy again. [repeat dose]

7 / July
Pond Cleaner sinks to the bottom of the pond and binds phosphate. This nutrient source for algae is removed. [repeat dose]

8 / August
Toru-Stroh lowers the pH and keeps the aquatic biotope clean, but unfavorable for algae.

9 / September
Maërl or **Maërl Crystal** increases the water hardness and the pond becomes clear and healthy again. [repeat dose]

10 / October
Sludge Cleaner removes pond bottom sludge. In this way, a nutrient source for algae is removed from the pond. [repeat dose]

Bottom material
for a perfect base

Pond soil and substrate have specific properties for use in the wet biotope. Velda uses natural resources for this and the search for new materials continues. Peat extraction in vulnerable areas is harmful to the climate and natural biodiversity. More and more people want sustainable and peat-free gardening. Velda wants to protect nature and stop global warming with its **peat-free pond soil**. Instead of peat, the soil is composed of renewable raw materials with similar properties. The share of coconut fibers in particular is higher in the new pond soil. Coconut fibers hold water well and ensure good rooting of pond plants.

also **peat free** pond soil

1

Plant care

for a pond full of life

Many gardeners like to include pond plants in their overall garden plan. Beautiful water lilies, marsh plants and oxygen plants create a genuine pond feeling in the garden. In order to get a healthy pond environment with clear water, at least half the pond surface should be covered with plants. And with the help of pond filtration and plant care from Velda, a beautiful plant pond is within reach.

Planting for years of pond enjoyment

Pond plants release oxygen and remove harmful substances from the water. The fast-growing oxygen plants in particular keep the water clear and free of algae. Marsh and bank plants give the pond that finishing touch. Choose the species carefully and create beautiful groups with varied colours, heights and leaf shapes. A beautiful water lily with lots of flowers will ultimately be the crowning glory in your plant pond. Even without fish, the pond feeling will be complete.

A pond full of plants

For a healthy pond it is important that the aquatic plants start growing well. They release oxygen and remove harmful substances. Pond planting that is applied in the right way will provide many years of pond pleasure.

1

Choose planting baskets

Start with a suitable plant basket for every pond plant. Oxygen plants can be placed in small baskets. Also very large plant baskets are available especially for water lilies. Place littoral plants in shallow water, using a flexible **Plant Sock** or **Overgrowing Mat**. Create a fascinating sight when you put marsh plants in **Floating Plant Islands**.

2

Use the right foundation

Fill the basket with pond soil or substrate before placing the plant root ball or tuber in it. **Superdensa** is especially for oxygen plants and use **Lelite** for the water lilies. **Plant Soil** and **Plant Substrate** are suitable for all kinds of marsh and littoral plants. Cover the soil with a layer of **Pond Gravel** to prevent the soil from washing out.

Tip: Add a few **Growth Balls** to the planting basket for a good start to the pond plants.

3

Ready for the pond

Slowly lower the plant baskets into the pond and put them at the correct water depth. Add **CO2 Tabs** to the water for a good growth of oxygen plants and use **Ferro Plus** especially for water lilies. Repeat the dosage weekly, then you are assured of beautiful pond plants for years to come.

Tip: In May you can propagate pond plants and water lilies and transplant them into new, spacious baskets.

Pruning promotes plant growth

In summer the pond plants grow fast and need to be pruned. Brown leaves and faded flowers can easily be removed with the extra long **Duo Pond Tool**. Also in the fall, when the plants die, this is a handy tool to remove plant parts from the pond.

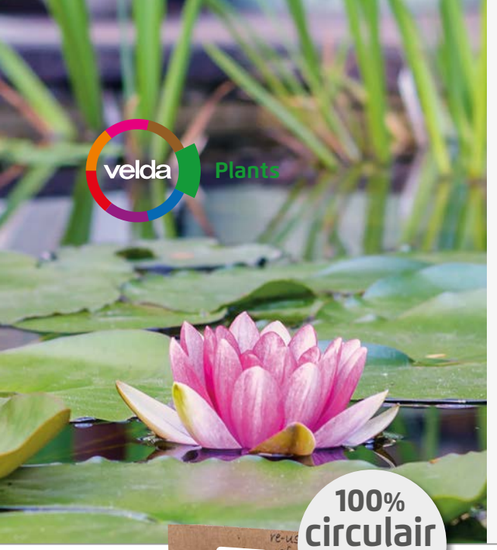

Attractively illuminated

Enjoy the aquatic life in the pond for longer with the **Welkin underwater lighting**. The water plants are subtly illuminated by 13 flexible LEDs, so that they remain visible, even when it slowly gets dark.

Tip: At least 50% of the water surface should be covered with plants to get a healthy pond.

1 **Floating Plant Island** plant basket □25 cm, □35 cm, Ø 25 cm, Ø 35 cm
2 **Plant Basket** for pond plants □ 18 cm, □ 25 cm, □ 30 cm, Ø 15 cm, Ø 25 cm
3 **Lelite** water lily soil 10 liter, 20 liter
4 **Growth Balls XL** 1100 g fertilizer for pond plants
5 **Ferro Plus** 1000 ml bivalent iron
6 **Duo Pond Tool** pond cutter and pincer in one
7 **Welkin Pond Light** underwater lighting, 13 LEDs

Plant fertilizer
for the best result

After the pond has been constructed, it is important that the water plants start growing well. The plants in the pond absorb phosphate and CO2, so that algae have no chance to grow. Plant food for pond plants has special properties for use under water. Velda is developing a completely new nutrient tablet with attention to the circular cycle. Sewage water contains valuable materials for plant growth. With this knowledge, Velda has made a nutrient tablet from the residual product of water purification. This re-use is better for the planet.

100% circulair re-use of residues

Information about the bacteria in Bacterial.

Bacterial for ponds
a well-known name since 1982

The pond is a closed ecosystem. Biological waste is converted by bacteria into nutrients for water plants, which in turn release oxygen into the water for a healthy pond. But if the biological balance is disturbed, algae can start to grow. That is bad for the water plants. Pond substrate on the bed with a dose of **Bacterial** (liquid) restores the biological balance of the pond quickly. The water purifying bacteria always need a bonding material. The bottom substrate in the pond is the ideal combination with Bacterial.

Bacterial cleaning also exists as an emulsion for pond filters. Pour the liquid bacteria into the filter, over areas where dirt accumulates. While the filter continues to work, **Bacterial Filterclean** ensures the biological breakdown of dirt. Without chemicals, the filter is cleaned and the water flow is improved.

velda Water

Water testing
prevents pond problems

Pond owners find testing methods complicated and they often have doubts about the results. So they often skip regular checking on water values. Velda makes water testing easy. You should always advise testing the water before using anti-algal products or fish medication in the pond. These products have a much stronger effect in soft pond water and you should advise customers to regulate water hardness first with **GH Plus** and **KH Plus**. In addition to these proven water improvers, there is now also the rapid hardness increaser **GH Booster** with an effective result and attractively priced.

Water treatment
makes ponds healthy

Fallen leaves, dead plants and excrements of fish can increasingly pollute the pond soil and form a layer of sludge. Lack of oxygen will acidify the pond soil, whereas decomposition of organic sludge is no longer possible. The water plants will no longer grow and algae will gain the upper hand.

Bio-Activator is a 2-in-1 product that cleans the bottom of the pond. By activating the pH-lowering granulate with the bacterial emulsion, the sludge will disappear quickly. These bacteria are active in oxygen-poor water and convert nitrate into gas bubbles that escape from the pond.

1	Product name	Product description	Art.nr.

velda Algae

Algae control

remove and prevent

Fibrous and slimy algae make poor demands on temperature and water quality. They can grow under circumstances when micro life and water plants cannot yet develop optimally. Besides, they absorb nutrients and catch the sunlight, so that water plants have no chance.

T-Flow Tronic

A permanent solution for the algae problem is to apply an electronic equipment. Owing to electric pulses between the copper anode and stainless steel cathode, copper ions are released, which will fight fibrous and slimy algae quickly and prevent them from developing.

1	Product name	Product description		Art.nr.	Price

Green pond water

Floating algae will turn your water green. You can no longer see any of the fascinating life below the surface and the oxygen plants stop growing. Sunlight and nutrientrich water lead to the rapid development of floating algae in the pond. **Crystal Clear** bonds floating algae and floating dirt. It makes green, turbid pond water clear again quickly.

Preventing algae

Phosphate in the pond is a nutrient source for algae. **Phos Stop** is a natural clay product that sinks to the bottom of the pond and bonds phosphate. **Phos Stop** can be used very early in spring to prevent algae and give the water plants a chance.

2	Product name	Product description		Art.nr.	Price
	Crystal Clear	*makes green water*			
	250 ml for 2500 litres of water	*crystal clear again*		120032	**8,99**

Spring fever in the pond

When spring arrives, you can help the pond and the fish to start up. The days are slowly getting longer and the sun is showing itself more often. A beautiful, sunny day is perfect for spring's first pond maintenance.

1

Preventing algae

As winter comes to a close, organic debris will have accumulated in the pond. Dead plants and leaves sink slowly to the bottom of the pond and form a thick layer of sludge. This material is a source of nutrients for algae in the spring. **Bio-Oxydator** breaks down pond sludge and prevents the acidification of the pond bed, shutting out the algae.

Tip: Choose 100% natural for your pond with **Sludge Cleaner** from Vincia. This product line stands for sustainable pond care with minimal impact on the environment.

Water hardness at the right level

Snow and rain can significantly reduce the hardness of the pond water due to a lack of minerals. So check water quality with an **Aqua Test Set** or **Strips**. Keep hardness at the right level. GH values between 8° and 12°DH, and KH values between 6° and 8°DH, are ideal.

If you know the water values, you can decide whether you need to take action. A sustainable approach is possible with a natural product that raises the hardness and improves the water quality. Opt for **Maërl** in powder form or the **Maërl Crystal** granules; they are easy to use.

2

Starting up the pond

To boost the natural processes in the pond, immediately add a dose of **Bacterial**. These water-purifying bacteria stimulate the sludge reduction and plant growth in the pond.

Tip: Always keep a dose of Bacterial ready because it has a positive effect on your pond at many times throughout the year. The liquid bacteria can be kept for 12 months and the freeze-dried version has an unlimited shelf life.

Fish in the spring

You will see your pond fish more often as days gets warmer. They get active and daily feeding is a good idea at a water temperature above 10°C. **All Season** is special fish feed for the transition from one season to the next.

3

Tip: In the spring, pond owners can have water samples tested at a range of garden centres.

Green water prevention

The days are gradually getting longer and the sun is shining more often. Everything in the garden is turning green but, unfortunately, so is the water in the pond. Sunlight triggers algae growth in the pond, even before the water plants start to grow. Install a new **UV-C lamp** in the filter system to kill floating algae. The oxygen plants benefit and they will grow better. That will keep your pond water clear throughout the year.

1 Bio-Oxydator 1000 ml, 2500 ml, 5000 ml removes bottom sludge
2 Sludge Cleaner 1700 g, 4250 g removes organic sludge
3 Mäerl 700 g, 1800 g, 3300 g **Mäerl Crystal** 1500 g, 3600 g
4 Aqua Test Strips 50 pieces to measure pH, GH, KH, NO_2, NO_3, Cl_2
5 Aqua Test Set to measure pH, GH and KH
6 UV-C Lamp 5, 7, 9, 11, 13, 18, 24, 36, 55 Watt for all PL fittings
7 Bacterial 50 ml, 200 ml, 1000 ml **Bacterial Liquid** 250 ml, 500 ml, 1000 ml
8 All Season Wheat Germs 6 mm 3000 ml easily digestible fish food

velda Fish care

Happy fish
will complete the pond

More and more, people are coming to see that pond fish are social animals, and that interaction goes much further than just throwing a handful of feed into the pond and observing the fish. Watching your fish becomes a unique experience with this floating transparent ball in the pond. The fish come and take a peek in the ball regularly, and that produces fantastic images. Close observation is also useful to discover fish affected by illness timely.

Additives per kg

Many pond owners enjoy keeping and caring for fish. The range of fish species available for ponds is enormous and the number of fish in relation to the amount of water is often much higher than in the wild. You should keep in mind that the natural processes in the pond can easily be disturbed. Fish food and excrement pollute the water. Even so, with the right pond filtration, this is not a problem.

Adequate and varied feed

Regular feeding is important for lively and healthy pond fish. As the water temperature rises (> 10°C), their energy needs increase and they can be fed abundantly. You should alternate between special colour pellets or natural food. And you will never forget a feeding session with an automatic **Fish Feeder** for the pond.

Adequate and regular feeding is essential for all pond fish. Particularly for koi, to keep them active and healthy. Give them high-quality fish food for good growth and lively colours. More importantly, fish diseases can be prevented with quality food from SaniKoi.

Healthy pond and happy fish

As well as the high protein content, SaniKoi food products contain high-quality ingredients. This means that up to 97% of the feed is digested and the fish absorb the protein perfectly. Excreta are kept to a minimum and so the pond water stays clean longer.

Free from genetic modifications

Food safety and sustainable production is important for people and animals. All SaniKoi fish food is produced in Europe and is GMO-free. Natural ingredients are used, without genetically modified additives.

UV sterilisation from the pond water

UV-C sterilisation
keeps the pond water clear

Floating algae transform pond water into a green slurry. You can hardly see the fascinating underwater life and the growth of oxygen plants will stagnate. Green pond water is caused by floating algae and occurs especially in newly sunk ponds with nutrient-rich water. Their numbers will increase explosively. A permanent solution for green turbid pond water is a UV-C filter.

UV light destroys many harmful organisms, like algae in the pond. The UV part of the light spectrum will damage the DNA of micro-organisms, so that they will not increase. Using a UV-C filter pond water is passed through a lamp, which radiates ultraviolet light. The water is sterilised and floating algae, germs and moulds are killed. This ensures crystal clear water and a healthy pond environment for fish and plants.

Pond filtration with
Clear Control pressure filter

Pressure filters

multifunctional and out of sight

A garden pond is more than just a container of water. It is a natural water biotope on a small scale. In free nature ponds are often much larger, biological processes are functioning properly, resulting in clear and healthy water. As to a garden pond nature has to be given a helping hand in order to reach a biological balance. Only then you can go on enjoying clear water, healthy plants and satisfied fish.

Ideal for a waterfall or stream

Pressure filters are quite suitable, besides their filter function, to feed streams, waterfalls or fountains with clear water. As the pressure filter can properly stand high pressure, it is capable to bridge a difference in height. Besides normal filtration various directions of water current are possible for administration of fish medicine, cleaning of the filter or emptying the pond. If a backwash function is involved, the water flow goes in opposite direction through the filter and carries along any accumulated dirt. A pressure filter is very user-friendly and easy to clean.

- **Multi position valve** makes it easy to clean the filter, empty the pond or use fish medication
- **UV-C lamp** destroys green floating algae and germs
- **Japanese mat** removes coarse dirt particles
- **Active carbon** filters fine particles and colour
- **Lava grit** good adherence of micro-organisms

Cross-flow filters
mechanical and biological

In a multi-chamber or cross-flow filter the pond water will pass through various filter materials. The water is being circulated by a pond pump. In the initial phase, the coarse dirt is stopped by Japanese matting. Then the water is flowing through biological filter chambers with activated carbon, filter substrate or lava. This contains very useful bacteria, which are good for the pond. Finally the water will pass through a fine filtering by means of filter foam.

- **Floating cover with nozzle**
  the filter floats just below the water surface and the outflow forms a small fountain
- **Built-in pump**
  constant circulation of pond water
- **UV-C lamp**
  destroys floating algae and germs
- **Filter foam cartridge**
  removes coarse dirt particles
- **Active carbon**
  filters the finest particles and colourings

Floating filter

No large pond full of fish, however, a smaller water garden which you want to keep clear? Then you should opt for the convenience of a floating filter. A compact combi filter with built-in pump and waterproof UV-C unit you simply place in your pond. The filtered water will flow over the top of the filter and causes beautiful wrinkling in your pond.

Water circulation with
Green Line pond pumps

Dirty water pumps
for 24/7 water circulation

The **Green Line** pumps from Velda are used for the circulation of pond water. This dirty-water pump is installed in the pond and it can pump water with dirt particles of up to 6 mm without clogging up. Circulation pumps have to operate day and night, year in and year out. That is why long service life and low energy consumption are guaranteed. Owing to their large capacity, these pond pumps are very suitable for (pressure) filters, waterfalls and streams. Position the pump at the maximum depth in the pond and install the return hose as far away as possible from the pump to maximise water circulation.

Delivery head and output
The distance and the height to be overcome determine the capacity of the pump.

All Velda filters are also available as complete set with Green Line pond pump.

Pond aeration with
Silenta air pumps

In every season
the pond in top condition

The **Silenta Outdoor** pump is rainwater-proof and it is located next to the pond. The air hose delivers oxygen to the air stone located in the pond. Oxygen is released into the water in the form of bubbles. At the same time, the bubbles remove harmful gases from deeper in the water. That prevents the suffocation of microlife and fish.

Hibernation in the pond

In winter time your pond is at rest. The fish are less active and the plants 'hibernate'. It is important to make sure your pond doesn't freeze over. Keep a close eye on the weather forecast, particularly night-time temperatures, and get your pond ready to cope with sub-zero temperatures.

1

Keep the pond free of ice

If you aerate the pond continuously, cold weather will never catch you by surprise. The air bubbles keep the water moving and stop it from freezing. In addition, harmful gases that have accumulated in the pond are removed. This ensures that your fish won't suffocate and it keeps the aquatic habitat healthy.

Opt for a **Silenta Outdoor** air pump that can cope with winter weather. This pump is positioned alongside the pond and it takes oxygen to the air stone in the pond through the hose.

2

Pond fish in the winter

Pond fish are cold-blooded animals that take on the ambient temperature. Digestion and actions of the fish are slower in cold water. It is enough to feed the fish twice a week at a water temperature below 6°C. Give them special **Winter Fish Food** with lower energy values. This feed also sinks to the bottom of the pond where the fish are.

Tip: Has the pond frozen over after all? You should never chop a hole in the ice because the vibrations can injure the internal organs of your fish. Make a hole by putting a pan of hot water on the ice. And then put an ice preventer in place to keep the hole open.

Keep your hands dry

In the winter, you leave the pond alone. But you sometimes have to do something in the water. Without proper protection, that can be an unpleasant job. You can keep your hands, arms and clothes dry by wearing these long waterproof gloves during pond maintenance. **Pond Gloves** cover the entire arm and they are kept in place with an elastic strip. They are also very convenient for putting in pond plants, pruning, cleaning, and installing and maintaining pond equipment.

Tip: Pond lighting is not only attractive in the summer. Especially during dark days you can enjoy the view of the water with these watertight **lighting spots**.
Is the pond located next to the patio or walkway? Lighting prevents a misstep in the dark and wet feet!

3

Protection against herons

Hungry herons go looking for food and the fish in the pond are an easy prey. There are several ways to protect your fish from this threat.

1 Silenta Outdoor 1200, 1800, 3600, 4800, 6000 aeration set
2 Winter Wheat Food 3000 ml sinking winter food
3 Ultra Protector set for electric fencing of 100 metres

4 Pond Gloves watertight gloves
5 Pond LED Lights 3 connected spots with 9 m cable

Find out more
Fish are safe in the pond with the Laser Guard scare-heron

Protect the pond fish
from herons and cats

A very effective way of keeping unwanted animals away from the pond is to install an electric fence. The unpleasant experience of the shock causes an instinctive flight response in herons, cormorants and cats so that they stay away. Fish will be safe in the pond again. Using the **Pond Protector** an electric fence of 2 wires up to 40 metres can be installed. A wire at a height of 25 cm against herons and a wire at 15 cm against cats and small animals.

Reflecting daylight

Herons will be shocked by the restless light reflections, caused by a shining spinner or floating ball. The **Heron Stop Spinner** and **Heron Stop Reflector** work according to this principle. Besides, such glittering bird scarer is a decorative element in the garden.

Light flashes and laser beams

The motion sensor of the **Laser Guard** detects approaching intruders and emits bright flashes of light, green laser beams and optionally also scare noises. Even before the heron lands at the pond side, he will take flight and leave the fish alone. Because herons quickly get used to deter methods there is variation in the program. Also cats who want to approach the pond are scared off.

Everything for mini-ponds

Just relax for a while after a busy day at your own water garden: who does not want to do that! Water brings peace, but also liveliness in a garden, patio or on the balcony.

1 Choose form and size

Fountain Ponds are lightweight mini-ponds for any garden, terrace, balcony or interior. Choose between round or square and two sizes. With fountain pump and plant basket.

2 Mini-pond preparation

First, clean the mini-pond and place it level at the desired location. Apply a layer of substrate or pond gravel. Use special **Mini-Pond Substrate** for clear water and healthy plants for a long period of time. Now fill the mini-pond with tap water and note: top up regularly with tap water!

Tip: Choose a shady spot for the mini-pond so that the sun does not heat up the water too much and algae do not form.

2

3

3 Make it perfect with plants

A real pond feeling is created when you add plants to the mini-pond. Ideal pond plants are *Japanese Pipewort, Marsh-marigold, Arrowhead* and *Iris*. For potting, use substrate or gravel and **Plant Baskets**. To keep the water clear, add some *Hornwort* or *Waterweed*.

4

Tip: Put a few **Growth Balls** in the plant basket for a good start of pond plants.

5

6

Even more atmosphere

The mini-pond becomes even more lively with a splashing fountain! **Super Fountain Pump** comes with a water bubble and a fountain head. A fantastic addition for the large square Fountain Pond is the **waterfall**. The gently-murmuring water flows through the mini-pond.

You can create a mysterious atmosphere on the water by adding a **Floating mist-maker.**

7

8

Tip: Enjoy blooming water lilies immediately with the **Floating Foam Flowers** from Velda.

9

6 Super Fountain Pump 800 11 Watt
7 Fountain Pond Waterfall □75 x 35 cm with waterfall
8 Floating Mistmaker 60 Watt
9 Lotus Foam white, pink, fuchsia, purple, orange, yellow

1 Fountain Pond Ø 75 x 35 cm, □55 x 32 cm, □75 x 35 cm (also with waterfall)
2 Mini-Pond Substrate 4 kg
3 Pond Gravel 4-6 mm, 8-12 mm, 2 liter, 8 liter, 15 liter
4 Plant Basket □ 18 cm, □ 25 cm, □ 30 cm, Ø 15 cm, Ø 25 cm

Water is fun
for large and small ponds

'We want water in our garden' is a desire which is often uttered by garden lovers. Just relax for a while after a busy day at your own water garden: who does not want to do that! Water brings peace, but also liveliness in a garden. Dragonflies and birds will visit your garden, terrace or balcony more frequently. Velda offers products for large and small ponds. For smaller gardens, patios and balconies, the Velda mini ponds are the perfect way to enjoy water.
